NYMEX
MARKET

July NatGas futures got off to a flying start last week as it gained 23 cents by the close on Wednesday. The storage report came out Thursday and with an assist from a bearish weather report pushed the market down 9 cents and continue down another 11 cents on Friday. Obama will take several steps to make tackling climate change a second-term priority. The focus is on power plants. The president is expected to announce new measures to fight global warming in the coming weeks. The changes are expected to highlight moves that will not require legislation by Congress. The good news is less coal will be used at U.S. power plants the bad news is will be used elsewhere. U.S. coal exports have made steady inroads into the Asian market since 2007. Almost all the U.S. coal exported to Asia went to the world's top four coal importers: China, Japan, India, and South Korea. Asia's share of total U.S. coal exports increased from 2% in 2007 to 25% in 2012. While U.S. coal has also been gaining market share in Asia, it provided less than 4% of Asia's coal imports in 2012, plenty of room for U.S. coal. Does moving coal use from one place to another help, we will get higher electric rates.
